

## Improved outcomes following implementation of the RapidAI platform

Analysis of 1,732 acute ischemic stroke patients over a three-year time period

### Post RapidAI Implementation

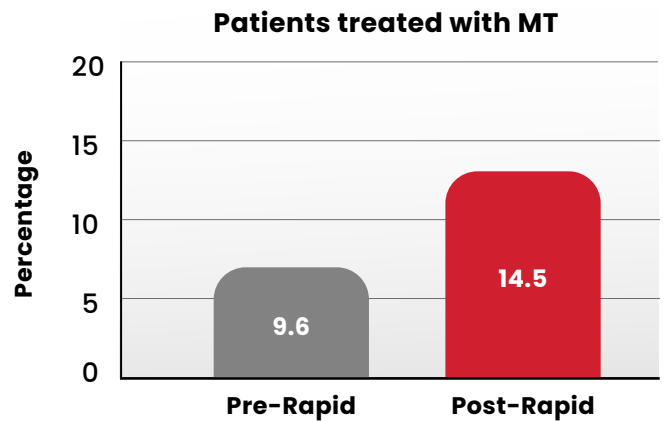

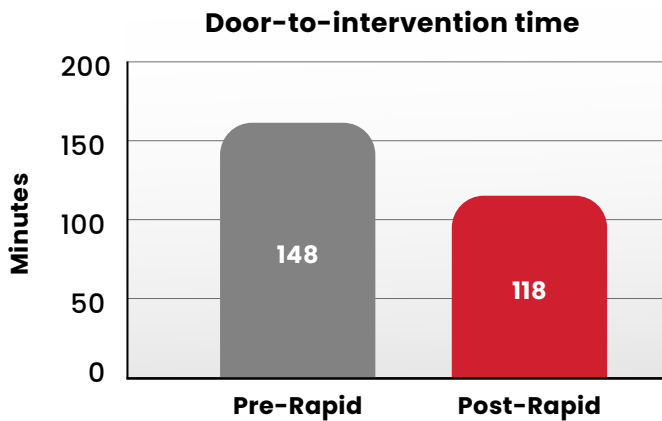

**Median reduction** of time per patient from door to Mechanical Thrombectomy

**30 MIN**

**Volume increase** of MT procedures, suggesting contribution to greater identification of MT-eligible patients

**51%**

### THE TAKEAWAY

RapidAI imaging platform and workflow optimization can help enhance stroke treatment protocols and optimize patient outcomes.

### Comprehensive benefits

#### Clinical

Reduced door-to-femoral puncture times and improved discharge Modified Rankin Scores

#### Operational

Significant improvement in the workflow for mechanical thrombectomy

#### Financial

Increase in MT and decrease in time-to-intervention may translate to stronger revenue
